

GRP Explained

Glass Reinforced Plastic Signs (GRP) Provides an exceptionally tough and superior sign base that cannot compare to other sign base materials i.e. wood, aluminium, acrylic or Foamex.

Base Material - Only Lloyd's Register approved resins & gelcoats are used, all recommended for their durability, colour stability and weather resistance.

Strength - Unlike some materials, e.g. acrylics & foamex, GRP will not shatter under impact. It stands up very well to all attempted vandalism.

Cleaning - All dirt, including graffiti, can be removed from the sign face of GRP with no deterioration to the surface. Recommended cleaning solvents are available.

Colour Fastness - It is very unlikely that any other material can match the potential life expectancy of GRP signs. Minimum life expectancy is 10 years.

Reusable - Due to the ease of cleaning, vinyl text can be professionally removed and replaced without leaving any visible marks.

Maintenance - Only an occasional clean with water & detergent is required to keep GRP signs in their original, pristine condition.

Fixings - There are no face fixings to GRP signs to detract from the copy & graphics. All fixings are concealed and suitable for wall or post mounting.
